

## Taiprora LYMPH: new lymph for your work environment

1/2

Experience, particular care for specific client needs and a continuous focus on innovation, makes our modules, developed by Web Engineering department, products that are **structured**, **scalable** over time, **functional** and **Cloud oriented**.

Without the need of a complete "revamping" of your work system, we introduce a **new way of think and consume your complex data**, better known as **Big Data**. Correct! That type of data that, until now, haven't been managed or that were too distant from you, from your colleagues and from devices (smartphones and tablets) that you commonly use.

Our studies and experience have brought us to offer a **complete solution that will change your mode of work**. This result is possible thanks to the following factors:

- **SmartWeb**, cross platform applications
- use of **latest web technologies**
- **responsive application design**
- **UBL APIs: Unique** Business logic Layer APIs
- no needs to stop your company work during installation and tests.

### What are SmartWeb applications?

Taiprora well knows the issues triggered by the choose to bring smart device near to the production environment. Which device use? Which operative system? Will my application be compatible with these new technology?

Taiprora's answer to all these question is: **doesn't matter**. Yes, a **SmartWeb application works on every type of device (iOS, Android, Windows)** and solves the following issues:

- no need to create a specific application for each type of operating system (iOS, Android, Windows): **finally one application, one deploy and one production environment for all devices!**
- a SmartWeb application **doesn't need to be deployed on a marketplace**; it resides in your existent IT environment without the obligation to make a bond with the operating systems applications's marketplaces (and relative costs and rules that resides behind them)
- one application means less locations where a problem may happen, **less maintenance costs** and a easier capabilities's improvement.

### The latest web technologies used by Taiprora LYMPH

Taiprora has surfed well on the web's new wave: **HTML5** and **CSS3** are our travel fellows that help us to reach some very important technologies. These are:

- **AngularJS**, the JavaScript framework that gives to our customer a new web experience
- **IndexedDB**, the HTML5 database which resides directly on the browser
- **AppCache**, the capability to store application directly on the client
- **Responsive Web Design**, the device doesn't matter, our application adapts to suite device's needs

The union of these powerful technologies brings us to a very big chance: the capability to create **offline web application** without the need to create a specific application for each type of device.

### UBL APIs: Unique Business logic Layer APIs

Taiprora LYMPH brings an **important strategic layer inside your company**: UBL - Unique Business logic Layer. This layer will be **the access key to all your company data**. Nowadays one of the big problem of complex company is to **access rapidly to data that come from different sources**, well known with the name of **Big Data**, and then mix them all together to get the desired result.

Taiprora LYMPH offers the **infrastructure** to put all these **Big Data** into a **simple and standard interface** that answers to requests from **any type of device**.

One more time we demonstrate that our power is to let **our customers to do more in a simpler way**.

### Why our customer should choose Taiprora LYMPH?

Reasons are many, but surely the most important are:

- **One for all**, a Taiprora LYMPH application can be used on every type of device offering solutions also to the offline/online scenario problems.
- **All for one**, all devices (or client) will have access to the Taiprora LYMPH application with a specific response based on their own topology, screen resolution and available capabilities.
- **Be a step forward**, the solution we gave introduces all last available and tested technologies allowing our customers to maintain their high quality standards.
- **Be ready**, the Unique Business logic Layer (UBL) allows to start thinking (and not just thinking) about a unification and consolidation of company data to simplify future internal customer requests and decrease new development (and also maintenance) costs.

Taiprora LYMPH offers a first-class ticket for the future of display of all corporate data, their management and aggregation, leading them on your phone, on your tablet and on your pc simplifying the development process and publication. A new lymph for your work environment.
